

Staff Portal — Career Partnership Hub

User Stories

Epic: Staff Portal Career Partnership Hub

As a Calbright Career Counselor, I want a unified workspace to manage Internship, Full-time, and Apprenticeship partnerships with external employers and workforce organizations so that I can move students from program completion into meaningful employment without juggling emails, spreadsheets, or disconnected systems.

Example - A Day in Rondy's Life

Rondy is a Career Counselor at Calbright, managing a roster of 200 students.

This morning, without the system (the current reality)

- **8:00** — Opens inbox. Email from Parker Dewey: "We have 3 CRM internship slots open."
- **8:10** — Replies to the email, jots it down in a personal Excel sheet.
- **9:00** — Another email: "We interviewed Mariah — she did well." Rondy pauses, trying to recall who Mariah is. Digs through Salesforce to pull up her profile.
- **10:00** — Tries to figure out which students to recommend for the Parker Dewey slots. Scrolls through the student roster, guessing from memory who's been doing well.
- **11:00** — AlliedUP calls: "We need 20 CHW apprentices next month." Rondy braces himself and starts building a new Excel.
- **End of morning** — Hasn't spoken to a single student all day. Spent the entire morning on data wrangling.

This morning, with the system (the intended reality)

- **8:00** — Parker Dewey email arrives. Logs the opportunity in 30 seconds (pick tier, fill fields, save).
- **8:05** — System automatically matches the opportunity to eligible students — it appears on their student cards.
- **9:00** — Mariah's interview feedback email arrives. Opens her referral record, updates status to "Interview Completed" in two clicks.
- **10:00** — Scans the student roster. Each student has a Readiness Score next to their name — picks candidates by score, not by memory.

- **11:00** — AlliedUP asks for 20 CHW apprentices. Opens the Cohort Matching tool. System lists all CHW students who are ready, ranked by Readiness Score. Checks the top 20, one-click submit.
- **The rest of the day** — Free to actually talk to students.

Product scope

- **Three partnership tiers** managed within one Partnership Hub (tabbed): L1 Internship · L2 Full-time Career · L3 Apprenticeship
 - **Staff-facing only** — Partner employers do not log into the system. Staff captures partner opportunities manually and maintains referral status as external feedback arrives.
 - **Program-agnostic framework** — Works for all 10 Calbright programs (IT Support, CRM, Data Analysis, Cybersecurity, Project Management, Network Technology, HR Learning & Development, HR Talent Acquisition, Community Health Worker, Medical Coding).
 - **Student visibility is opt-in** — Students are not notified by default; staff chooses when to loop them in.
-

Scenario 1: Partner Opportunity Intake

Context Career counselor Rondy Yu receives an email from Parker Dewey: "We have 3 micro-internship slots open for CRM/Data students, remote, 4-week engagement, \$500 stipend each." Today he emails back, forwards to the team, and tracks slots in a spreadsheet. In the new system, he captures this opportunity once, in the Partnership Hub, and the system routes it to matched students.

User Stories

US-1.1 As a career counselor, I want to create a new Partner Opportunity from the Partnership Hub with a minimal required-field form so that I can log an opportunity in under 2 minutes between partner calls.

US-1.2 As a career counselor, I want to tag the opportunity as Internship (L1), Full-time (L2), or Apprenticeship (L3) at creation so that the opportunity lands in the correct Hub tab and triggers the right downstream flow (individual referral vs. cohort matching).

US-1.3 As a career counselor, I want the opportunity form to show different required fields per tier so that I'm not asked for cohort-size data on a single-seat internship or for course-credit details on a full-time role.

US-1.4 As a career counselor, I want to associate an opportunity with one or more Calbright programs (e.g., "CRM + Data Analysis") so that the candidate-matching logic only surfaces relevant students.

Acceptance Criteria

- "New Opportunity" button is present on the Partnership Hub header and on each of the three tabs
 - Common required fields across all tiers: Partner Name, Partnership Tier, Role Title, Associated Programs (multi-select), Location Type (Remote/Hybrid/Onsite + city if applicable), Open Seats, Application Deadline, Contact Person at Partner (name + email, stored for audit, not used for auto-email)
 - L1 Internship adds: Duration (weeks), Stipend/Paid status, Course-credit eligible (Yes/No)
 - L2 Full-time adds: Salary Range, Employment Type (W2/Contract), Start Date Range
 - L3 Apprenticeship adds: Cohort Size, Wage-during-training, WIOA-funded (Yes/No), Program Sponsor (e.g., "AlliedUP Co-op"), Commitment Length (months)
 - On save, opportunity gets a unique ID, status **Open**, and appears in the correct tier's tab
 - Activity log entry created: "Opportunity X created by [staff name] on [date]"
-

Scenario 2: Student Job Readiness Score

Context Counselor Rondy is looking at his student roster. He needs to know, at a glance, which students are actually ready to be recommended to partners — and which still need more workshop completion, more program progress, or counselor conversations. Today he maintains a mental model. The system should make this explicit and transparent.

User Stories

US-2.1 As a career counselor, I want to see a Job Readiness Score (0–100) on every student profile so that I can prioritize outreach to students who are ready-to-place.

US-2.2 As a career counselor, I want to click the score to see its breakdown (program progress, workshop completion, CPL status, intake assessment signals, my own counselor rating) so that I understand why a student is or isn't ready and can coach them on the gap.

US-2.3 As a career counselor, I want to set or override a Counselor Confidence rating (1–5) on a student so that my professional judgment about interview readiness, communication skills, and follow-through is reflected in the score.

US-2.4 As a career counselor, I want students above the "Ready" threshold (≥ 70) to be visually flagged on the student roster and on the student dashboard so that I can spot them without opening every profile.

Acceptance Criteria

- Job Readiness Score appears in the student dashboard's Career Partnership card and on the student roster table
 - Score formula (MVP): Program Progress 30% + Workshop Completion 20% + CPL/Credential 15% + Intake Assessment 15% + Counselor Confidence 20%
 - Score breakdown is visible in a popover/drawer; each factor shows its raw input and weighted contribution
 - Counselor Confidence defaults to null until the counselor sets it; score shows "Needs counselor input" banner when null and the student has $\geq 50\%$ program progress
 - Ready threshold: ≥ 70 shows green "Ready" badge; 50–69 shows amber "Nearly Ready"; < 50 shows no badge
 - Score recomputes daily (overnight) and on any trigger event (workshop completed, CPL approved, counselor rating changed)
 - Historical score trend (last 90 days) visible as a sparkline in the breakdown drawer
-

Scenario 3: Matched Referral for Individual Opportunities (L1 & L2)

Context Rondy opens Mariah Villalobos's student dashboard. Her Job Readiness Score just crossed 72 after she completed Digital Literacy. The Career Partnership card shows "3 matched opportunities" — a Parker Dewey CRM internship, a Snap Inc. data analyst role, and an Accenture full-time position. Rondy reviews the matches, picks Parker Dewey as the best fit, and sends the referral in one click.

User Stories

US-3.1 As a career counselor, I want the Career Partnership card on a student dashboard to show matched opportunities ranked by match quality so that I can quickly see the best options for this specific student.

US-3.2 As a career counselor, I want to see why each opportunity matches (program alignment, location, readiness fit, partner tier preference) so that I can judge fit rather than trust a black box.

US-3.3 As a career counselor, I want to send a referral with one click, with an optional personal note to the partner, so that the flow is faster than writing an email.

US-3.4 As a career counselor, I want to override match filters and refer a student to an opportunity that doesn't perfectly match (e.g., wrong program but strong fit) so long as I enter an override justification, so that I retain professional judgment.

US-3.5 As a career counselor, I want to choose whether to notify the student when I make the referral (off by default) so that I control when students are informed.

Acceptance Criteria

- Career Partnership card on student dashboard lists up to 5 matched opportunities, sorted by match score
 - Each opportunity card shows: Partner name + logo, Tier badge (L1/L2), Role title, Match score + 2–3 match reasons (e.g., "Program match: CRM", "Location: Remote fits", "Readiness: 72 ≥ 65 required"), Deadline countdown
 - "Refer" button on each card opens a modal with: referral note (optional), student notification toggle (off by default), confirm button
 - "Refer to non-matched opportunity" is available via "Browse all open opportunities" link; override requires a justification text field (min 20 chars)
 - On referral submission: creates a Referral record with status **Referred**, entry in student's Activity timeline, entry in Referral Management page
 - If "Notify student" is on: triggers a notification in Student Portal (existing notification system) with generic text; referral details stay staff-only
 - Default tier for this scenario is L1/L2 only — L3 Apprenticeship does not appear on individual matching (see Scenario 5)
-

Scenario 4: Referral Status Tracking & Update

Context Three days after Rondy referred Mariah to Parker Dewey, he gets an email: "Parker Dewey reviewed Mariah's profile and scheduled a 15-min intro call." Rondy needs to log this. Today it's a Salesforce task, an email thread, and a spreadsheet. In the new system, he updates the referral status in two clicks from the Referral Management page.

User Stories

US-4.1 As a career counselor, I want a Referral Management page that shows all my active referrals (all students, all partners) in one filterable table so that I can see the full pipeline without opening each student.

US-4.2 As a career counselor, I want to update a referral's status through a simple status picker (Referred → Partner Reviewed → Interview Scheduled → Interview Completed → Offer Extended → Offer Accepted / Offer Declined / Rejected / Withdrawn) so that state transitions take under 5 seconds.

US-4.3 As a career counselor, I want to add timestamped notes to a referral (e.g., "Partner said they loved her CRM demo") so that context is preserved across staff shift changes.

US-4.4 As a career counselor, I want stale referrals (no update >14 days) to surface at the top of my page so that I follow up on them before they silently die.

US-4.5 As a career counselor, I want automatic alerts when a referral hits critical states (Offer Extended, Offer Accepted) so that I can congratulate the student and close the loop.

Acceptance Criteria

- Referral Management page accessible from left nav, shows table: Student Name, Partner, Tier, Role, Current Status, Last Updated, Days Stale, Staff Owner
 - Filters: Tier (L1/L2/L3), Status, Partner, Program, Stale >14 days, My Referrals Only
 - Status transitions enforce order but allow backward moves with a reason; Withdrawn / Rejected are terminal states
 - Each referral has a notes timeline (append-only, timestamped, staff-attributed)
 - Stale referrals (no status change in 14 days) get an orange pin icon and sort above fresh ones when "Stale first" is toggled
 - Critical state alerts: Offer Extended and Offer Accepted trigger a banner notification on the staff's home page and an optional email
 - Student dashboard also shows the referral status inline on the Career Partnership card for that student
 - On Offer Accepted: system automatically prompts "Mark student as Placed? This will update Placement metrics for [Partner]." — staff confirms
-

Scenario 5: Cohort Matching for Apprenticeships (L3)

Context AlliedUP Co-op tells Calbright: "For the spring cohort, we can take 20 CHW apprentices, starting May 1." This is the deep-partnership model pioneered in January 2026 with SEIU-UHW and AlliedUP. Instead of 20 individual referrals, staff needs to batch-match CHW students who are program-ready, lock the selection to prevent double-booking, and send a single cohort referral to the partner.

User Stories

US-5.1 As a career counselor, I want a Cohort Matching tool inside the Apprenticeship tab of the Partnership Hub so that L3 opportunities route through batch matching, not individual referrals.

US-5.2 As a career counselor, I want the tool to auto-generate a candidate pool based on the L3 opportunity's program + cohort size + readiness threshold so that I start from a pre-filtered list, not a blank slate.

US-5.3 As a career counselor, I want to review the candidate pool sorted by Job Readiness Score descending, with ability to remove students or add students from outside the auto-filter, so that I can apply judgment.

US-5.4 As a career counselor, I want students added to a cohort to be "locked" (cannot be added to another cohort simultaneously) so that two staff members don't independently select the same student for conflicting placements.

US-5.5 As a career counselor, I want to submit the full cohort as a single Cohort Referral with one audit entry (not N entries) so that the Partner Performance Dashboard and student activity feeds don't get spammed with N identical records.

US-5.6 As a career counselor, I want cohort-level status tracking (e.g., "18 of 20 accepted, 2 declined") so that I see the partnership outcome at the cohort level, not just per student.

Acceptance Criteria

- "Start Cohort Matching" button appears only on L3 opportunities
- Cohort Matching screen shows: target cohort size, program filter (locked to opportunity's programs), readiness threshold (default ≥ 65 , adjustable)
- Candidate pool displays as a sortable table: Student Name, Readiness Score, Program Progress, Location, Last Counselor Contact, Already in Another Cohort (Yes/No, with cohort name)
- Student rows disabled + grayed if "Already in Another Cohort" — hovering explains which cohort
- Staff can check/uncheck students; "Auto-fill to target size" button selects top-N by Readiness Score among unchecked eligible students
- Staff can "Add student manually" via search to include students outside the auto-filter; manual adds require a note (min 20 chars)
- "Submit Cohort Referral" creates one Cohort Referral parent record + N locked student-level records; cohort gets status **Submitted**
- Locked students show a subtle "In [Cohort Name]" tag on their dashboard; unlockable only by the cohort owner or admin
- Cohort status dashboard shows per-student status in a compact grid; cohort-level roll-up at the top (e.g., "Reviewed: 20 · Interviewed: 18 · Offered: 16 · Accepted: 14")
- Terminal cohort states: Closed (all students resolved), Abandoned (cohort canceled before partner response)

Scenario 6: Partner Performance Dashboard

Context Rondy is deciding where to recommend his next Cybersecurity graduate. He has three Cybersecurity-friendly partners in the Hub. Before he recommends, he wants to see: Which partner responded fastest last quarter? Which partner actually extended offers vs. ghosting? Which partner gave students the best feedback? Today he has no answers. The Partner Performance Dashboard gives him data-driven intuition.

User Stories

US-6.1 As a career counselor, I want each partner's detail page in the Partnership Hub to show performance metrics (placement rate, average response time, offer rate, student feedback score) so that I can rank my recommendations by evidence rather than gut feeling.

US-6.2 As a career counselor, I want to see partner performance side-by-side with other partners in the same tier + program so that relative comparison (Partner A vs. Partner B for CRM) is possible.

US-6.3 As a career counselor, I want partner metrics to be grounded in a time window (last 90 days default, adjustable) so that a partner that had a bad Q1 isn't permanently penalized if their recent performance improved.

US-6.4 As a career counselor, I want low-performing partners to show a contextual note ("Parker Dewey: response time ↑ in last 30 days, check with partnership team") so that bad metrics invite a conversation rather than auto-exclusion.

US-6.5 As a career counselor, I want to export a partner's performance snapshot as a PDF so that I can share it with Calbright leadership when discussing partnership strategy.

Acceptance Criteria

- Each partner profile page shows 5 KPIs: Placement Rate (accepted offers / total referrals), Offer Rate (offers / interviews), Average Response Time (referred → reviewed), Student Feedback (avg 1–5 rating from post-placement survey), Referrals Volume
- Comparison view: from the partner page, "Compare to similar partners" button shows a side-by-side card list filtered by same tier + overlapping programs
- Time-window selector at page top: 30 / 90 / 365 days / All Time; metrics recompute instantly
- Low-performance threshold warnings (not exclusions): Placement Rate <20%, Response Time >21 days, Student Feedback <3.0 — displayed as contextual banners with a "View trend" link to the 90-day sparkline
- Export button generates a PDF with partner profile + current-window metrics + sparkline trends
- Dashboard tile on Partnership Hub home: "Top 5 partners by Placement Rate" and "Partners needing attention" (3 worst by combined score)

Non-Functional Requirements

NFR-1 · Data residency — All partnership and referral data is stored in Calbright's existing Supabase/Postgres infrastructure with existing RBAC. Partner contact emails stored for audit only, never exposed to students.

NFR-2 · Audit compliance — Every state transition (opportunity created/edited/closed, referral status change, cohort submit, student lock/unlock) is logged with timestamp + staff ID + reason-when-applicable. Audit log is append-only.

NFR-3 · Role-based access — Career Counselors can CRUD opportunities and referrals for their assigned students. Success Counselors can view but not create. Partnership Team admins have full access plus partner onboarding/offboarding rights.

NFR-4 · Student privacy — Default behavior is student-blind: no notifications, no student-visible record of referrals unless staff explicitly enables student notification at referral creation. On Offer Accepted, system prompts staff to notify student (still opt-in, but strongly nudged).

NFR-5 · Performance at scale — Readiness Score computation must handle 10,000+ active students overnight in under 15 minutes. Partnership Hub page must load in <2 seconds even with 500+ open opportunities.

NFR-6 · Graceful absence of data — New partners (no historical referrals) display "New partnership — metrics available after first 5 referrals close" instead of zeros. Empty Hub tab shows onboarding illustration + "Add your first opportunity" CTA.

NFR-7 · Existing system integration — Readiness Score ingests from existing program progress (Canvas LMS), workshop completion (Workshops module), CPL status (CPL module), and Intake Assessment. No double data entry for any of these inputs.

NFR-8 · Notification opt-in enforcement — Student Portal notifications only fire when staff toggles "Notify student" ON at referral creation or at terminal states (Offer Accepted, Offer Declined). Never auto-notify on intermediate status changes.

Glossary

- **L1 · Internship** — Short-term, often during program, sometimes course-credit eligible (e.g., Parker Dewey micro-internships, CHW clinical placements)
- **L2 · Full-time Career** — Post-graduation employment opportunities (e.g., Accenture, Snap, Docusign hiring for Calbright graduates)
- **L3 · Apprenticeship** — Deep employer partnership with guaranteed cohort placement, often WIOA-funded, model pioneered by CHW + SEIU-UHW + AlliedUP Co-op (January 2026)

- **Readiness Score** — 0–100 composite reflecting a student's readiness for employer referral
- **Referral** — A staff-initiated record linking one student to one L1/L2 opportunity
- **Cohort Referral** — A staff-initiated record linking N students (locked together) to one L3 opportunity
- **Placement** — Final outcome state: student accepted an offer from a partner
- **Partner Performance** — Aggregated metrics per partner, windowed over configurable time range
